

IMPACTING QUALITY MEASURES AT THEIR CORE Need an Osteoporosis "Bone Density" Screening Partner?

We understand that early identification and improvement of quality outcomes affects your patient's and member's overall health. Our care management services are designed to favorably affect those difficult to improve quality measures that help drive impact to your required measures.

Our Bone Density Screenings are provided by licensed Physicians (MD/DO), Nurse Practitioners, Physician Assistants and medical technicians, who give patients focused attention and personalized support when time is not permitted during regular doctor visits.

We will partner with you to identify those within your patient population who are most likely to need a bone density screening, including postmenopausal woman and men aged 50 and older as well as those who have recently broken a bone. MedHealth Solutions follows the National Osteoporosis Foundation recommendation of a bone density test of the hip and spine by a central dual energy x-ray absorptiometry (DXA) machine to diagnose osteoporosis. Our healthcare professionals will deliver a comprehensive Bone Density Screening to your identified members in the convenience of their home.

During the Bone Density test your provider will look for the following:

- Detect weak bones and predict their chance of breaking a bone in the future
- Estimate density, normal, low or osteoporosis before patients' break a bone
- Diagnoses osteoporosis after a broken bone
- Determine if bone density has improved, gotten worse or stayed the same
- Find out how well osteoporosis medicine is working

According to the Alliance on Aging Research, by 2025 annual direct costs from osteoporosis are estimated to rise to around \$25.3 billion annually. Early detection and timely treatment can greatly reduce those costs and improve your patients' quality of life; improving your quality of care outcomes for your population.

MedHealth Solutions provides customizable programs for the effective delivery of health management services within specialized populations, and our goal is to impact quality measures at their core. MedHealth Solutions works with hospital and health plan clients to positively impact healthcare outcomes for their patients and members.
